50X1-HUM

1.

new aircraft types which would later be transferred to Peenemuende airfield. (1) No new aircraft arrived at the field up to 22 July.

2. On 14 July, the air force personnel permanently stationed in Karlshagen underwent infantry training at night.

3.

during good weather, flying was practiced daily by single-engine fighters in connection with firing at towed sleeve-targets. No jet fighters were engaged in such practices. Firing at towed sleeve-targets was performed almost regularly by four planes flying behind each other. The planes had in-line engines and retractable landing gears. Night flights were occasionally made by individual jet fighters up to the early morning, providing the weather was favorable.

4. The fuel station, which was built by the Germans, was being increased with additional containers. It formerly belonged to the V-missile installation which is out of operation. At present it stores fuel for aircraft of the field. No additional fuel stations exist in the area except for a filling station for motor vehicles at Karlshagen parking site. All the aircraft fuel tank-trucks at this site are being filled at the Peenemuende fuel station and then return to Karlshagen. Mostly at night, the tank trucks leave Karlshagen for the airfield. They are usually accompanied by trucks occupied by air force personnel.
